Wido van Peursem, leader of ETCBC. Initiator and strategic leader.

Oliver Glanz, Andrews University. ETCBC data expert, contributing numerous queries for teaching.

Dirk Roorda, DANS. Author of most of the code.

System for HEBrew Text:
ANnotations for Queries and Markup
funded by
CLARIN-NL, The Language Archive

SHEBANQ relies on data and tools created by

Eep Talstra, founder of ETCBC. Still computing (Pascal): participant data in the making.

Constantijn Sikkel, data designer for ETCBC. Inventor of efficient data creation work flows.

Janet Dyk, linguist at ETCBC. Long-time data contributor, specialized in verbal valence and language variation.

Reinoud Oosting, data designer for Leiden University. Contributed ETCBC data, now key user.

Ulrik Sandborg-Petersen, creator of Emdros. Without it, SHEBANQ would not exist!

contributors in the past

Henk van den Berg, DANS. Programmed the first versions.

Heleen van de Schraaf, then DANS. Programmed the first user interface.

You can give keywords to notes. The combination of a user and a keyword represents a *note set*. These note sets behave a lot like queries. They can show up next to the passages which contain their individual notes.

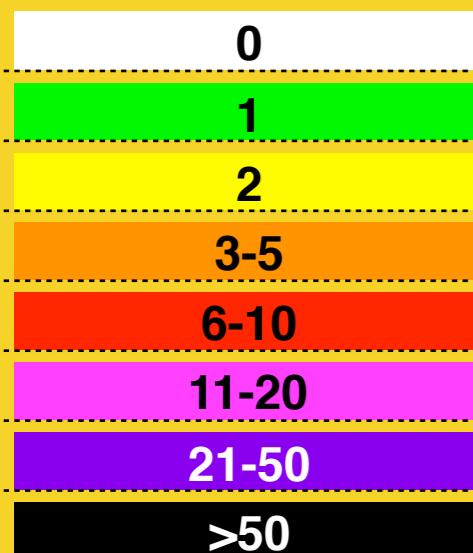

Charts show you where in the Bible the word occurrences and query results are

Back to the word or query you came from

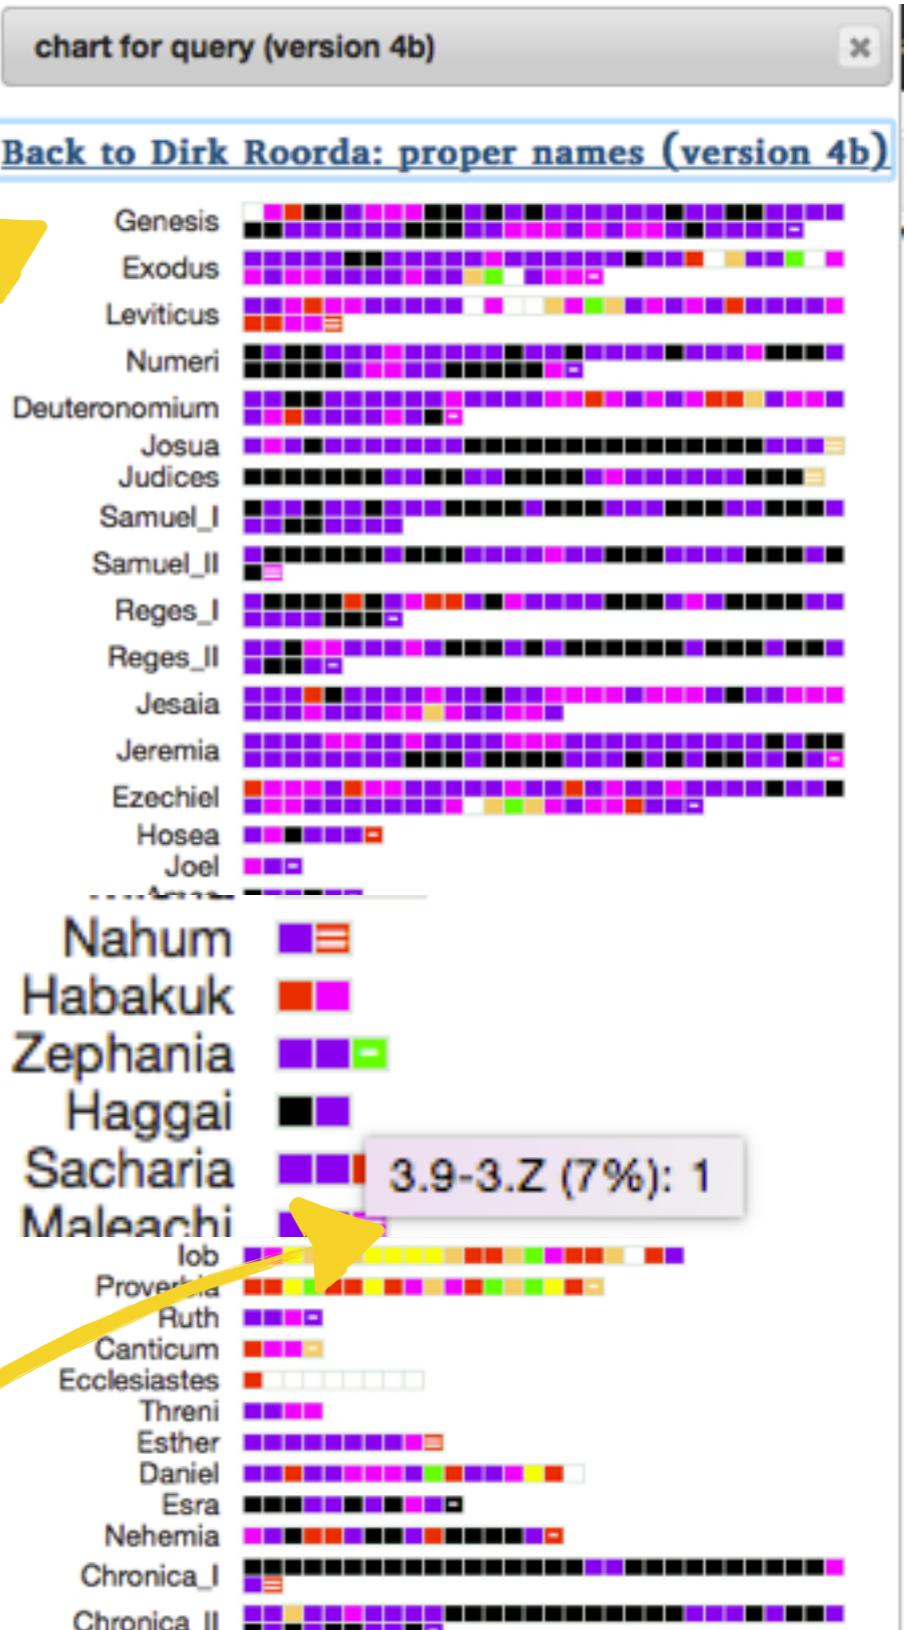

Every **cell** corresponds to a block of 500 words. Click it to go to the text.

Hover to see the chapter range and the amount of hits/occurrences

The **color** in the cell indicates the *absolute* number of results / occurrences in that block

Last blocks of a book have lesser size. The size is indicated in a tooltip (%) and the block is marked with = (< 25%) or - (between 25% and 75%)

Chapter ranges:
 23.Z = chapter 23, last word
 23.z = chapter 23, at position >95%
 23.6 = chapter 23, at position 60%

2014-07-14: First version of the ETCBC4 database in SHEBANQ [The data for this version is a snapshot. At some locations the encoding is not yet finished. We needed a reasonable version then because of the deadline for SHEBANQ as a project.]

Work on the ETCBC database is ongoing. The text itself does not change much, but the coding of **linguistic annotations** is not yet completed. It is a combination of manual work and programming. While the coding at the lower levels (word, phrase) will not change much, work at the level of clause, sentence, paragraph, discourse is less stable.

Version 4 is a snapshot of the best data available when SHEBANQ was released. **Version 4s** will be a new, stable release of the ETCBC data, expected in 2015. **Version 4b** is an intermediate version, which will be updated several times until **4s** comes in production. It is not backed up in an archive and should not be used to *publish* queries. Its purpose is to enable you to see how the ETCBC team is filling the gaps in the data.

Versions and Words

etccbc 4 4b 4s

Aramaic Hebrew

אָבִים

Genesis 4: 21

Versions and Queries

You can run queries on all available versions of the data.

If needed, you can adapt the MQL to each version: every query has a version-dependent part and a version-independent part.

you can **share** a query as a *whole*, so that others can see it

you can **publish** an *individual version* of a query, so that it can be cited.

The MQL and the results of a published query will be **frozen** (hence the icy color). You cannot edit or re-execute a published query.

It takes one week before a published query version gets frozen. During that week you can still *un-publish* it.

The screenshot shows a window titled "Complements of נתן and locatives" from "Dirk Roorda ETCBC Data and Tradition". The main area displays the results of a query with the subject "נתן". The results are as follows:

status	results up to date
published	<input checked="" type="checkbox"/> 2015-04-09 10:41:07
results	937
words	3081
modified	2015-03-09 11:44:53
executed	2015-03-09 11:44:53

Below this, there is another section labeled "4b" with the status "never executed" and "published" set to "x". At the bottom, there is a "Guides" link.

3081 words in 833 verses on 42 pages

ודְבִיקַת יוֹרֵש אָתֵי:

Versions and Notes

Individual notes are always comments to a particular clause in a particular version of the data.

Note sets may contain notes on all versions of the data.

You can set individual notes as **shared** and/or **published**. You refer to them by the sets they are in i.e. by the combination of user and keyword. Shared and published sets can grow and shrink, but published items cannot be removed from sets anymore.

Click the version numbers to switch versions.

Share or Publish queries?

When you **share** a query, others can see what you are doing, in all of its versions

You can modify a **shared** query; you can run all (unpublished) versions of it

You can **un-share** a query any time (provided it has no published versions).

A merely **shared** query is unsuitable for citing in journal articles

When you **publish** a query version, you and others can cite it plus its results

You cannot modify a **published** query version; you can not run that version

You cannot **un-publish** a query version (except within a week after publishing it).

You can add other query versions next to a published version; you can still modify the query *description*.

Query versions are published independently from each other

A **published** query *version* is suitable for citing in journal articles. Its MQL body and results are frozen. It may become part of the scholarly record.

The screenshot shows a software interface for managing query versions. At the top, there is a header with the text "תְּלִין and locatives" and "Dirk Roorda ETCBC Data and Tradition". Below this, there are sections for "Complements of תְּלִין" and "Subject".
The interface displays two query versions:
1. A "shared" version (status: checked) with a timestamp of 2015-03-09 11:44:53. This version has "results up to date" and a count of 937 words.
2. A "published" version (status: checked) with a timestamp of 2015-04-09 10:41:07. This version has "never executed" and "None" listed under results.
At the bottom, there is a section titled "Guides".

Citation

Chapter links are links in which the particular view settings by you are encoded. You can show other people the page as you see it.

Word links are links to pages for individual words and all their occurrences. A word is tied to a particular *version* of the data.

Note links are links to pages for note sets. Note sets can contain notes to different versions of the data

Query links are links to pages for queries and all their results. Use them to point to a **shared** query.

Query version links are tied to a particular version of the data. Use them to **cite a published** query.

⬇ markdown link;
[title] (<http://shebang...>)
You can paste this in query descriptions.
SHEBANQ then shows them as friendly hypertext links.

⬇ internal link (for use in your *notes*)
shebang: `book=Genesis&chapter=1&version=4&mr=m&qw=q&tp=txt_p&wget=x&qget=v&nget=v`

⬇ offers you the url only
<http://shebang...>
You can use this for Twitter, email, citations.

You receive warnings if you ask a link to an **unshared** query or to an **unpublished** query version.

You are also warned if the query in question has outdated results.

Hint: copy the page content and paste it in an email or in Evernote. For personal hands-on work!

Making queries

About organizations and projects: although orgs and projects and queries are shown in a tree, with projects under orgs, in fact there is no hierarchy between orgs and projects. Some projects are carried out by multiple orgs, and orgs can run multiple projects. So you will see repeated occurrences of the same project.

Start with clicking + (you need to be logged in)

The screenshot shows the SHEBANQ interface with a navigation bar at the top: SHEBANQ, The Text, Words, Queries, Notes, Help, News, Sources. Below the navigation bar are buttons for 'simple' and 'advanced' modes, and a 'Filter' section containing a search input ('dirk'), a 'Level' section with categories like 'organizations' (16), 'projects' (30), 'users' (69), and 'queries' (501). A large yellow callout box on the left says: "While editing your query, choose an existing org/project by clicking the blue circles in the tree". The main area displays a hierarchical tree of queries. A yellow arrow points from the 'Organizations' section of the tree to the 'Organization' field in the 'New query' dialog. Another yellow arrow points from the 'Projects' section of the tree to the 'Project' field in the 'New query' dialog. The 'New query' dialog itself has fields for 'Name' (test query), 'Organization' (DANS), 'Project' (Test Project), 'Name' (test project x), and 'Website' (http://x.y). There are also buttons for saving, discarding, and closing the dialog. A yellow callout box at the bottom right says: "But you can also add a new org and/or project on the fly!". A yellow callout box at the bottom center says: "Click to discard or to save or to save and close the name of the query and its associated org and project".

Making queries

+ Enter new query

New query

Name test query

Organization DANS

Project Test Project

after checking you go straight to the page where you can edit your query instruction and write a description

If you want to work on another version of the data, click its version indicator.

Click **edit** to get started with editing the actual MQL instruction.

Finally, click **execute** to execute the query on the indicated version of the data.

If you need more space, you can get it by clicking

No query results

While editing, you can still modify the name and description of the query.

For every version of the data, you can write and run a separate MQL instruction.

Name, description, and sharing are properties of the query as a whole.

MQL, publishing, number of results are properties of a query w.r.t. a specific version.

Customize highlighting of queries

show published queries only

reset query highlighting to factory settings

highlight hits of all queries in the list

show query highlights according to settings below

Why does my query not appear in the list?

1. it is not shared/published
2. its results are outdated
3. it has no results in this chapter
4. I have muted this query

The screenshot shows the Genesis software interface. At the top, there are several buttons: 'show words' (blue), 'reset highlights' (green), 'highlight all' (orange), and 'show highlights' (yellow). Below these are buttons for 'published' (blue), 'selected' (green), and 'all' (orange). A large yellow callout points to the 'selected' button with the text 'show query highlights in one fixed, color selected **left**'. Another yellow callout points to the 'all' button with the text 'switch off all query highlighting'. A third yellow callout points to the 'selected' button with the text 'customize the highlight color of a single query. Uncheck the box to uncustimize.' To the right, a list of queries is shown, each with a colored square icon and a label like 'A Barrient.. this is my t..'. The interface is in Hebrew, with some English labels.

Navigating notes

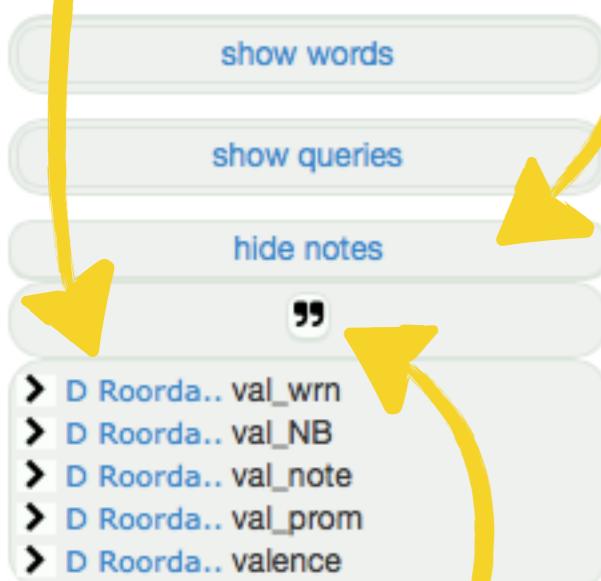

Click the author to go to the note set and see all its members (with chart and csv exports)

There is a third sidebar, showing the note sets relevant to this passage

Here are the controls to hide or show notes. One for the whole chapter at once, and ones for each individual verse

The notes menu brings you to an overview of all user contributed note sets

notes are only accessible in Notes view

Allow only published notes to show up

The main interface shows a Hebrew text from Genesis 1:1. The top navigation bar includes 'SHEBANQ', 'The Text', 'Words', 'Queries', 'Notes' (highlighted in blue), 'Help', 'News', and 'Sources'. The status bar shows 'etccbc 4 4b 4s Genesis 1 text Notes (1/3)'. The text is analyzed with parts of speech: ברא (Obj), אלhim (Subj), ואת (Pred), השמים (Time). Below the text, there are two sections of notes. The first section, under 'valence', has one note: 'valence_10_[בְּרָא] create [4] & the heavens and & the earth'. The second section, under 'val_note', has one note: 'The valency notes are computed by LAF-Fabric. See the [Ipython notebook](http://nbviewer.ipython.org/github/etccbc/laf-fabric-...)'. At the bottom, it says 'No notes'.

The screenshot shows the eTcbc interface with the following elements:

- Top Bar:** Shows "etcbc 4" with buttons for "4b" and "4s", the title "Genesis 1", chapter number "1", a right arrow, "text", and "Nicolai (1/3)".
- Text Area:** Displays Hebrew text: "אַתָּה שְׁבֹרִי אֱלֹהִים בְּרַא בְּרֹאשֵׁית אַתָּה אֶרְצָה". Below it, a pink box contains the text "This is a new note. After saving, you get another new note.".
- Notes List:** A table showing notes from Nicolai. The columns are: icon, note type, content, and author. The notes are:
 - normal: ntn xpa special attention
 - error: ntn coding error in subject phrase
 - note: xpa let op de אַתָּה
 - info: aap noot
 - info: fjm
- Bottom Notes:** A yellow box at the bottom left says "You can copy/paste Hebrew text from the surroundings." A yellow arrow points from this text to the Hebrew text in the main area.
- Legend:** A legend on the left explains the icons: normal (blue dot), note (blue star), ok (green checkmark), warning (yellow exclamation mark), error (red cross), and info (blue info icon).
- Annotations:** Yellow callout boxes provide additional information:
 - "Editing notes" (top left)
 - "Show/hide notes for whole chapter" (top left)
 - "Show/hide notes for this verse. When you hide unsaved notes it becomes red." (middle left)
 - "Click to cycle through:" (bottom left)
 - "Save notes for this verse or all verses" (top middle)
 - "Revert to last saved value" (top middle)
 - "Delete a note by making keywords and text empty" (top middle)
 - "Share notes. New notes are shared by default." (top right)
 - "Click to publish/unpublish. Published notes freeze after a week." (top right)
 - "Notes are only accessible in notes view" (far right)

Editing notes (advanced)

You can add various **hyperlinks** in your notes. They all have a markdown-like syntax. **Note: no space between] and (**

This note set is a typical result of a csv upload

Here are detailed specifications of the csv files that you submit.

You need a tool like **LAF-Fabric** to generate the precise clause_atom numbers that are used to link notes to their target clause_atoms.

Bulk note upload through csv

You are not allowed to upload csv files with notes. Please contact [Dirk Roorda](#) for permissions.

Here are the specifications:

> general

✓ column names

The first line contains the name of the columns, exactly as follows:

`version book
chapter verse clause_atom
is_shared is_published
status keywords ntext ;`

every following line should have exactly the same number of fields;

> passage indicator

> anchor to the text

> sharing

> status

> keywords

> ntext

Familiar with Python? Feeling the urge to do more with this data?
LAF-Fabric offers an API by which you can master the data

nbviewer

LAF-Fabric supports walking over the data.

You can fire MQL queries within LAF-Fabric as a starting point ...

and then use the full, detailed results programmatically

It is an off-line tool, open source, and you can download the ETCBC4 data, Open Access. Start with [readthedocs](#).

תַּתְלִין and locatives

We try to mark all those occurrences of תַּתְלִין + object + complement. What we want to mark is whether the complement is a proper indirect object or a locative.

This is part of Janet's project of creating a valence dictionary and using a flowchart to arrive at the meaning of a verb in its context of complements.

First we use an MQL query to get all occurrences of תַּתְלִין with an object and a complement. Then we apply a few heuristics to detect those cases where the complement is a locative or an indirect object.

The query is also on SHEBANQ, a version by [Dirk](#) and a version by [Janet](#).

```
import sys
import collections
import subprocess

from lxml import etree

import laf
from laf.fabric import LafFabric
from etcbc.preprocess import prepare
from etcbc.mql import MQL
fabric = LafFabric()
```
