Wido van Peursen, leader of ETCBC. Initiator and strategic leader.

Oliver Glanz, Andrews University. ETCBC data expert, contributing numerous queries for teaching.

Dirk Roorda, DANS. Author of most of the code.

System for HEBrew Text:
ANnotations for Queries and Markup
funded by
[CLARIN-NL, The Language Archive](#)

SHEBANQ relies on data and tools created by

Eep Talstra, founder of ETCBC. Still computing (Pascal): participant data in the making.

Constantijn Sikkel, data designer for ETCBC. Inventor of efficient data creation work flows.

Janet Dyk, linguist at ETCBC. Long-time data contributor, specialized in verbal valence and language variation.

Reinoud Oosting, data designer for Leiden University. Contributed ETCBC data, now key user.

Ulrik Sandborg-Petersen, creator of Emdros. Without it, SHEBANQ would not exist!

contributors in the past

Henk van den Berg, DANS. Programmed the first versions.

Heleen van de Schraaf, then [DANS](#). Programmed the first user interface.

בָּנָן and locatives
ETCBC/Data and Tradition

Complements of בָּנָן

Subject

A special case in the quest for valence patterns: בְּנָה with Pred + Objc + Cmpl.

Topic

Which of the phrases marked as Cmpl are locatives and which are indirect object?

Query

This query only extracts the set of candidates, further analysis of them is done in a corresponding LAF-Fabric notebook

MQL technique

Two things complicate the otherwise straightforward formulation of this query:

- We look for three phrases in *any order*, and MQL requires that we write out all orders explicitly
- We want all the words of the phrase marked as Cmpl. If we just say [word]* there are many spurious matches, because we did not say that these words should be all words of the complement. So we must use the keywords first and last, but then we have also the case that there is only one word, which should be first and last.

2014-10-23: Current version of the ETCBC4 database, somewhere between versions 4 and 4s [This version is updated periodically until version 4s is available; it can be used as a preview to version 4s]

We provide access to **multiple versions** of the data. Results that you obtain now, will remain available, even when newer versions of the data are added to SHEBANQ.

Work on the ETCBC database is ongoing. The text itself does not change much, but the coding of **linguistic annotations** is not yet completed. It is a combination of manual work and programming. While the coding at the lower levels (word, phrase) will not change much, work at the level of clause, sentence, paragraph, discourse is not finished.

Version 4 is a snapshot of the best data available when SHEBANQ was released. **Version 4s** will be a new, stable release of the ETCBC data, expected in 2015. **Version 4b** is an intermediate version, which will be updated several times until **4s** comes in production. It is not backed up in an archive and should not be used to *publish* queries. Its purpose is to enable you to see how the ETCBC team is filling the gaps in the data.

Versions and Words

There are many changes in the lexicon. The older version misses a lot of glosses for proper names.

etcbc	4	4b	4s
Aramaic	Hebrew		
 	 	832 words	

On word pages, you can switch from version to version. SHEBANQ knows how to find the corresponding entry in another version.

 retrieving corresponding word entry

Genesis 4: 21

Versions and Queries

You can run queries on all available versions of the data.

If needed, you can adapt the MQL to each version: very query has a version dependent part and a version independent part.

you can **share** a query as a *whole*, so that other can see it

you can **publish** an *individual version* of a query, so that it can be cited.

The MQL and the results of a published query will be **frozen** (hence the icy color). You cannot edit or re-execute a published query.

It takes one week before a published query version gets frozen. During that week you can still *un-publish* it.

Complements of נָתַן

ודְבִיקַת יוֹרֵש אָתֵי:

Share or Publish queries?

When you **share** a query, others can see what you are doing, in all of its versions

You can modify a **shared** query; you can run all (unpublished) versions of it

You can **un-share** a query any time (provided it has no published versions).

A merely **shared** query is unsuitable for citing in journal articles

When you **publish** a query version, you and other can cite it plus its results

You cannot modify a **published** query version; you can not run that version

You cannot **un-publish** a query version (except within a week after publishing it).

You can add other query versions next to a published version; you can still modify the query *description*.

Query versions are published independently from each other

A **published** query *version* is suitable for citing in journal articles. Its MQL body and results are frozen. It may become part of the scholarly record.

The screenshot shows a software interface for managing query versions. At the top, there's a header with the text 'בְּנִין and locatives' and 'Dirk Roorda ETCBC Data and Tradition'. Below this, there are sections for 'Complements of בְּנִין' and 'Subject'. A yellow arrow points from the 'published' section of the first query version in the list to the 'published' field of the second query version. Another yellow arrow points from the 'status' field of the second query version to the 'never executed' status. The interface includes various buttons and a text area with MQL code.

Citation

Chapter links are links in which the particular view settings by you are encoded. You can show other people the page as you see it.

↓ offers you a markdown link
[title] (<http://shebang...>)

You can paste this in query descriptions. SHEBANQ then shows them as friendly hypertext links.

🔗 offers you the url only
<http://shebang...>

You can use this for Twitter, email, citations.

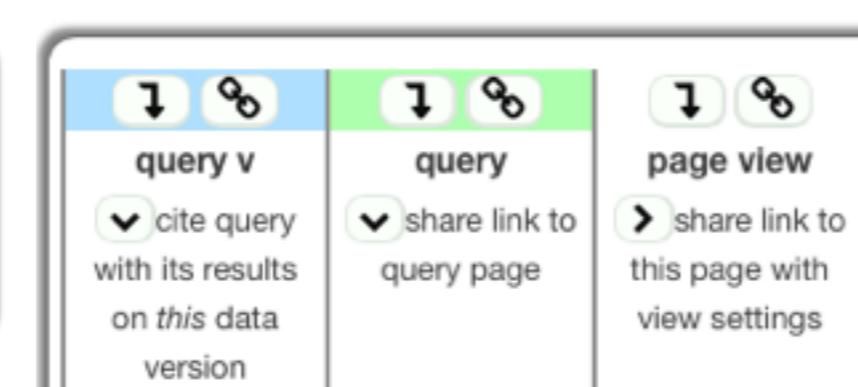

Word links are links to pages for individual words and all their occurrences. A word is tied to a particular *version* of the data.

You receive warnings if you ask a link to an **unshared** query or to an **unpublished** query version.

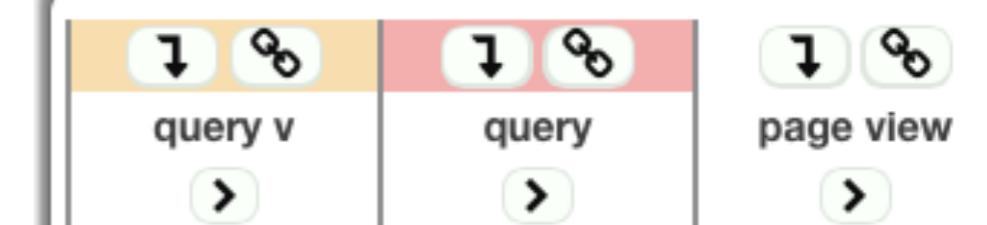

You are also warned if the query in question has outdated results.

Query links are links to pages for queries and all their results. Use them to point to a **shared** query.

This query has been published. If that happened more than a week ago, it can be safely cited. It will not be changed anymore.

The results of this query have been obtained after the query body has been last modified

Beware of citing this query. It has not been published. It may be changed later.

The body of this query has been changed after its current results have been obtained.

Query version links are tied to a particular version of the data. Use them to **cite a published** query.

hint: Click a verse number to toggle data view

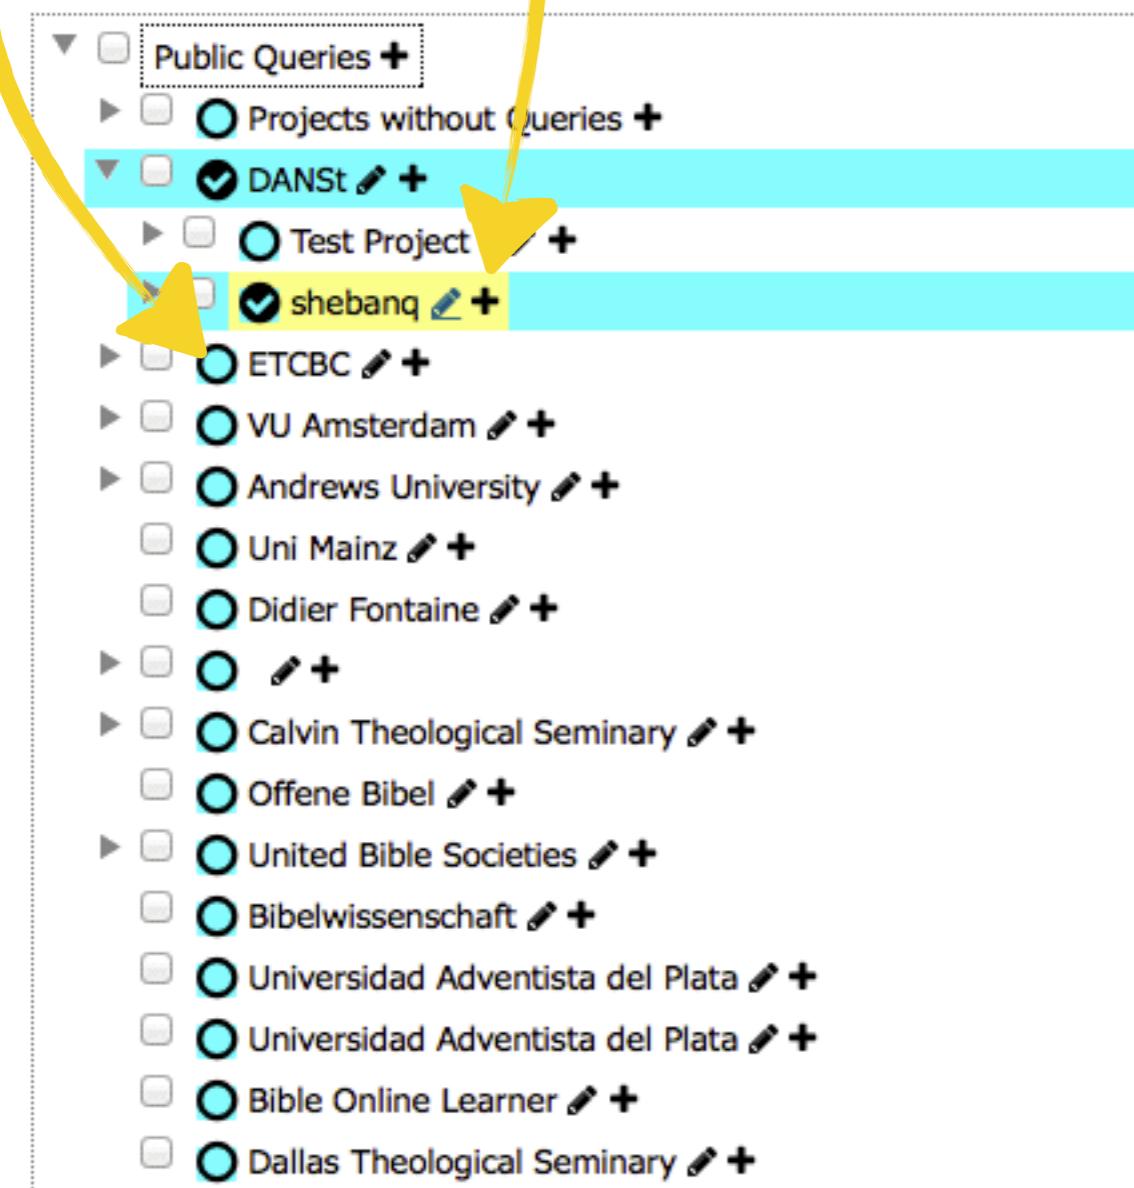

Start with clicking a + next to the project to which the new query belongs

You can modify org/project by clicking the blue circles while editing your query

About organizations and projects: although orgs and projects and queries are shown in a tree, with projects under orgs, in fact there is no hierarchy between orgs and projects. Some projects are carried out by multiple orgs, and orgs can run multiple projects. So you will see repeated occurrences of the same project.

As a consequence, a project does not belong to any org if there is no query in it. Only when a query is connected to an org and a project, that project shows up under that org.

New projects first show up under *Projects without queries*.

Add new query

discard, save, or save and exit

Customize highlighting of queries

show published queries only

reset query highlighting to factory settings

highlight hits of all queries in the list

show query highlights according to settings below

Why does my query not appear in the list?

1. it is not shared/published
2. its results are outdated
3. it has no results in this chapter
4. I have muted this query

The screenshot shows the Genesis software interface with a toolbar at the top and a list of queries on the left. The main area displays a text passage in Hebrew with various words highlighted in different colors (e.g., blue, red, yellow). A legend on the right identifies the colors: blue for NTN with object and complement by ..., red for NTN with object and complement by ..., and yellow for other categories.

Annotations with arrows point to specific features:

- An arrow points from the "show published queries only" button to the "show query highlights according to settings below" button.
- An arrow points from the "reset query highlighting to factory settings" button to the same button below it.
- An arrow points from the "highlight hits of all queries in the list" button to the same button below it.
- An arrow points from the "switch off all query highlighting" button to the "customize the highlight color of a single query. Uncheck the box to uncustimize." button.

Below the annotations, a legend defines the colors:

- NTN with object and complement by ... (Red)
- NTN with object and complement by ... (Blue)
- Other (Yellow)

LAF-Fabric offers an API by which you can master the data

LAF-Fabric supports walking over the data.

You can fire MQL queries within LAF-Fabric as a starting point ...

and then use the full, detailed results programmatically

It is an off-line tool, open source, and you can download the ETCBC4 data, Open Access. Start with [readthedocs](#).

תְּלִין and locatives

We try to mark all those occurrences of תְּלִין + object + complement. What we want to mark is whether the complement is a proper indirect object or a locative.

This is part of Janet's project of creating a valence dictionary and using a flowchart to arrive at the meaning of a verb in its context of complements.

First we use an MQL query to get all occurrences of תְּלִין with an object and a complement. Then we apply a few heuristics to detect those cases where the complement is a locative or an indirect object.

The query is also on SHEBANQ, a version by [Dirk](#) and a version by [Janet](#).

```
import sys
import collections
import subprocess

from lxml import etree

import laf
from laf.fabric import LafFabric
from etcbc.preprocess import prepare
from etcbc.mql import MQL
fabric = LafFabric()
```

The notebooks you create with LAF-Fabric, you can share online

Documentation and Support

If a page in SHEBANQ acts weird, it is always a good idea to refresh the page.
